

Nimsoft Unified Reporter

Easy Performance and Availability Reporting—Across Data Centers, Cloud, SaaS, and Virtual Environments

Key Features

- 100+ prepackaged reports deliver immediate value
- Fast, easy drag-and-drop report building
- Rich business intelligence and analytics deliver valuable insights
- Report scheduling, distribution, and historical versioning
- Leverages Nimsoft Monitor data collected from internal systems, virtualized infrastructures, SaaS offerings, cloud services, or outsourced environments
- Robust capabilities for designing complex reports, via iReport

Benefits

- Better access to IT reporting information—across all users and groups within an organization
- More informed decision making yields improved IT and business performance.
- Minimize time and cost associated with IT report generation and distribution

Introduction

Even the best IT monitoring data doesn't do an organization any good if it's too difficult for users to access or interpret. To gain the insights they need to optimize IT and business performance, IT administrators and business users need timely, intuitive, and easy access to monitoring data.

Nimsoft Unified Reporter provides the robust reporting capabilities organizations need to fully leverage all of the monitoring data generated by Nimsoft Monitor. Nimsoft Monitor, built on the Nimsoft Unified Monitoring™ architecture, delivers unprecedented infrastructure coverage, breadth of functionality, scalability, ease of deployment, ease of use, and extensibility. Now, with Nimsoft Unified Reporter, organizations can easily develop reports based on any monitoring data from Nimsoft Monitor—including internal servers and networking equipment, virtualized infrastructures, SaaS offerings, cloud-based services, or outsourced environments.

The Solution

Powered by interactive Web 2.0 and dynamic HTML technologies, Unified Reporter enables end users to build reports and do ad hoc queries—without any programming expertise or assistance from IT. Users can simply drag and drop items into the query builder, add desired filters and parameters, and generate the query they need. Further, Unified Reporter enables users to save, share, schedule, and distribute reports as needed.

Robust Report Control

With Unified Reporter's iReport offering, administrators and report designers can gain total control over the contents as well as the look and feel of every report. This kind of control ensures report presentation is as powerful and as easily understood as possible. With iReport, designers can create Web-based and print-ready reports in virtually any style—including dashboards, tables, crosstabs, charts, and gauges.

iReport enables business users to:

- Create professional reports in a range of layouts and formats
- Get live previews of reports in any format available before finalization and distribution
- Upload and download reports to and from the Unified Reporter repository, and share with users
- Embed drill-through and hypertext links, including PDF bookmarks
- Tailor reports to various geographies, users, and groups
- Leverage multiple data sources through a range of interfaces, including JDBC, XML, POJO, EJB, MDX, CSV, and custom
- Output reports in HTML, PDF, XLS, RTF, SWF, ODF, and TXT

Leverage Comprehensive Insights

NMS is a single solution that can monitor a broad range of application

About Nimsoft

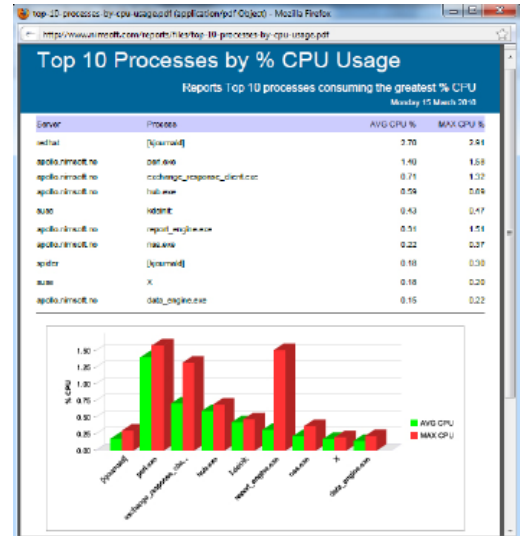

Nimsoft is a global leader in IT Management-as-a-Service. The company's lightweight ITMaaS solutions make it easy for enterprises and service providers to implement comprehensive, adaptable monitoring and service desk capabilities essential for managing today's dynamic computing environments. Learn more at www.nimsoft.com.

servers, Web servers, databases, and network devices—across all standard operating systems and virtualization platforms. In addition, the Nimsoft product suite extends this coverage to external cloud environments, SaaS, and hosted platforms. With Unified Reporter, organizations can deliver reports that fully leverage this comprehensive monitoring coverage.

100+ Pre-packaged Reports

Sample Report Types:

- Apache
- Cisco
- Exchange
- MySQL
- Oracle
- MS SQL
- DNS
- DHCP
- RUM
- VMware

- Servers
- Response Times
- Memory
